

100 Base Pair DNA Ladder

Catalog # L-101

Lot: 3

Quantity Supplied: 300 ul at 1 ul per loading (300 loadings)

Storage Buffer: 10 mM Tris-HCl, 1 mM EDTA, pH 8.0 (TE buffer)

Store at -20 °C or below.

Repeated freeze-thaw cycles have no effect on this product. Vortex gently after thawing.

Description: This ladder consists of forty blunt end DNA bands at exactly 100 bp to 4,000 bp in 100 bp increments. Two features of the ladder facilitate band identification: (1) A high intensity 500 bp band, and (2) Bands from 1,000 bp to 4,000 bp are more intense than bands from 100 bp to 900 bp. G+C content of the bands is 48%.

Recommended Use: Make a Working Solution of the ladder in the tube labeled "Working Solution" as follows:

200 ul 5X sample loading buffer

750 ul TE buffer

50 ul ladder stock solution

A common 5X sample loading buffer is 40 mM Tris-OAc, 1 mM EDTA, pH 8.0, 0.05% bromophenol blue, 50% glycerol. Load 20 ul of the Working Solution on the gel. (This is equivalent to loading 1 ul of the Stock Solution on the gel). Bands can be visible by ethidium bromide staining. The Working Solution may be stored at 4 °C for a few months. For long term storage, store the Working Solution at -20 °C or below. Store the Stock Solution at -20 °C or below.

Tips for Best Results:

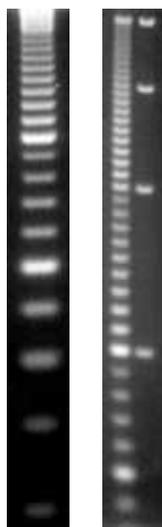

(1) For best resolution of 100 bp to 1,500 bp bands, use a high sieving agarose (such as 2% metaphor agarose). For best resolution of 500 bp - 4,000 bp bands, use 1% agarose. Resolving fragments above 3,000 bp requires running a 20 cm length 1% agarose gel.

(2) Fill the gel well completely. A partially filled well may result in band smearing.
